

Rajit Sinha

469-901-0656 | rajit.viral@gmail.com | Plano, TX | Intended Major: Aerospace Engineering

EDUCATION

Lebanon Trail High School

Frisco ISD — Frisco, TX

Expected May 2027

GPA: 3.807/4.0 (4.937 weighted, 6.0 scale)

- SAT: 1510 (790 Math, 710 Reading & Writing); 12 AP courses; Top 20% of a class of 551

EXPERIENCE & LEADERSHIP

Texas High School Aerospace Scholars (NASA) — Design Engineer

NASA Johnson Space Center

2025 – 2026

Houston, TX

- Selected for the residential Base Camp experience as 1 of 62 students statewide from 1,014 applicants, advancing through a five-month online aerospace course
- Served as Design Engineer on a nine-member team for Moonshot, an Artemis-themed design challenge, producing a Preliminary Design Review for a lunar EVA helmet and glove system balancing hazard protection against astronaut mobility alongside a NASA consultant
- Modeled the EVA glove assembly in Fusion 360 (coupler, glove entrance, finger covers) and researched its five-layer construction: bladder, restraint, coil, thermal, TMG
- Presented technical findings to NASA engineers and scientists in a poster session; completed design challenges and facility tours at JSC

American Rocketry Challenge — Team Captain

GEM Academy & Center

2024 – 2026

Plano, TX

- Led a team through the design, build, and flight testing of a competition rocket after a year as a member
- Built the rocket's flight computer — Arduino Nano R4 and DPS310 barometric sensor wired to a servo-triggered parachute deployment
- Wrote and bench-tested the flight software: pressure-to-altitude conversion, sensor noise filtering, and apogee detection to time recovery
- Flight tested configurations from 470–509 g on Estes F50 and AeroTech F30/F32 motors; designed recovery hardware including a custom hexagonal parachute and 3D-printed components
- Diagnosed an in-flight deployment failure as insufficient servo torque after confirming the avionics had functioned correctly

Young Tech Pioneers — Vice President of Fundraising

Youth entrepreneurship and technology nonprofit

2024 – Present

Frisco, TX

- Took over fundraising the summer after joining as a tenth-grade member, raising money for a nonprofit teaching business and technology to K–8 students
- Helped run 10 Children's Business Fairs where 200+ kids started their own businesses and raised over \$10,000 collectively, handling vendors, volunteers, and event logistics for crowds of 150–200

TECHNICAL PROJECTS

Independent Technical Work | *Fusion 360, 3D Printing, Google Apps Script*

2024 – Present

- Design and print functional engineering parts: rocket hardware, structural components, and prototypes
- Built an automated scholarship tracker that sorts entries dynamically and prioritizes them by deadline

HONORS & AWARDS

BPA State: 1st Digital Marketing, 2nd Digital Communication & Design, 3rd Information Tech, 5th Computer Programming (2026); State qualifier 2025

BPA Regionals: 3rd Computer Science Concepts, 7th Information Technology Concepts (2024)

AP Scholar with Distinction (2026); **AP Scholar with Honor** (2025); **UIL Solo & Ensemble** State Qualifier (2024)

Community Service: GEM Center volunteer, 100+ hours

TECHNICAL SKILLS

Languages & Tools: Python, Java, C++, Fusion 360 (CAD), Arduino IDE, 3D printing

Areas: Embedded systems, sensor filtering, flight simulation, data analysis, design and failure analysis
